## Supertunia® Vista Series

Formerly Happitunia Bubblegums®

*Petunia Hybrids*

### KEY BENEFITS

**Supertunia® Vista** are show stoppers with their masses of stunning flowers. Planted in sunny garden beds or in garden plantings, or in pots these **Supertunia® Vista** more than hold their own among flower and shrub gardens. Like all Petunias, they are fast growing, well suited to larger pots and bigger hanging baskets. The plants are self-cleaning with the fresh flowers and leaves covering over older ones.

### ORIGIN

**Supertunia® Vista** were bred in Japan by careful selection. In Australia and New Zealand the **Vista Series** are outstanding performers in your gardens, pots and hanging baskets. In the Series we have 'Bubblegum', still one of the best; 'Silverberry', a complimentary off white bloomer; 'Fuchsia' which is sure a fire colour machine and a deeper red pink; and now also 'Paradise' which in the red tones compliments the others. *Petunia* are all inter-related through cross breeding over many years. *Hybrid Petunia* are so well known they do not need describing. Original species are seldom grown today. All are native of the South Americas.

### USES

The **Supertunia® Vista Series** are ideal for gardeners who like a good show in their garden with minimum effort. The plants need care as they establish but once growing there is little after care needed to produce a good show of flower. In large pots around the garden, near pools or barbecues, on balconies and on sunny courtyards the plant will give a good show. Look under care for instructions on ways to prolong the longer life of your plants.

### CARE

**Supertunia® Vistas** are easy to grow and maintain. Watering needs are average. When dry, water the plant to keep them looking good. When planting out or potting on in late winter or spring incorporate slow release fertiliser at recommended rates. This will get the plant away to a good start. Once September arrives your plant will be growing well. A soluble high nitrogen fertiliser applied every three or four weeks will keep the plant in top condition. When hand watering make sure that the soil ball is saturated. Around December, when the plants are in full growth, but starting to look a little overgrown, a pruning followed by a new application of slow release fertiliser will result in bushy growth and bursts of vigour giving lots of new flowers. Trim back the longer branches just enough to bring them back in line to the sides of the pots. As the plants grow make sure that you keep the fertiliser up to them.

Another super selection from the team at Proven Winners.

Add to the Wonder of the **Supertunia® Vistas** with the newest, 'Paradise'. A vibrant bright red/ pink shade as vigorous and hardy as the existing three that are so well known and admired by all gardeners who demand a show with minimum of effort.
